# **OFFICE & RETAIL SOLUTIONS**

Have you ever been in a store, debating whether those pants are indeed navy blue or black? Or if that sweater is more orange or red? Colors change depending on lighting, making it that much more important to have great lighting in retail stores. LED lights are the best on the market to showcase products in their truest colors, whether you are selling clothing, paint samples, or furniture!

Sitler's LED Supplies has the lighting solution for your office or business. Whether you have a small office or a large retail store, we have LED lighting to suit your needs.

Talk to one of our LED experts today to learn more about the benefits of switching to LED.

"I wouldn't recommend anybody but Sitler's."

Mike Duggan, The Furniture Barn Charles City, Iowa

#### **LED BENEFITS**

LED lighting is designed to provide quality lighting with minimal service. By switching, your benefits will include:

- Improved Lighting Quality
- Doesn't Cause Fading or Color Change
- · Ideal for Small Spaces and Displays
- Significantly Reduced Maintenance
- Reduced Energy Usage

## **NO MORE FADE**

Clothing, paint and furniture colors all fade over time, for various reasons. Did you know lighting could be a major factor in fading and discoloration? Most traditional light bulbs, such as fluorescent tubes or incandescent bulbs, even CFLs, give off UV rays that cause fading and discoloration. In a retail setting with clothing and fabric covered furniture, this means your products could be fading and losing quality over time.

With LED lighting, no UV rays are given off, completely eliminating the chances of fading due to poor lighting! This means that items that don't move as quickly, such as furniture, will stay in pristine condition for much longer!

### **BETTER FOCUS**

Today, 90 percent of people spend the majority of their time indoors, whether they are working, going to school or at home. This means quality indoor lighting is imperative to your health. Without properly adjusted lighting, your body's circadian rhythm is disrupted which can affect your overall health. LED lighting can be used to the benefit of your company by controlling the light to model natural light cycles. This is referred to as Human Centric Lighting (HCL).

Human Centric Lighting has been shown to improve a person's long-term focus and visual acuity, as well as circadian rhythms, sleep, mood, perception, and performance and productivity. HCL is designed to dim and brighten according to specific times during the day and even particular environments such as schools, hospitals and office buildings.
